

## Wide Angle Lens for MagicShine, Gemini, Lupine Bike Light

- Lens replaces the stock glass lens. The light will not seal properly if used together.
  - Unscrew the bezel that holds the lens.
  - Remove the glass lens and insert the new lens with the smooth side out.
  - Reinstall the bezel.
  - The lens must be installed with the ridges vertical. When the bezel is close to tight and the ridges are in the proper direction, you can hold the lens still by applying pressure with your thumb while tightening the last turn.
  - Clean as needed with a soft damp cloth.
-
